

Heart Rhythm Assessment

Recorded on Nov 29, 2022 3:55 PM

19 yr (Sep 29, 2003) • Male

Inconclusive LOW HEART RATE

Low heart rate | If your heart rate is under 50 beats per minute, the ECG app can't assess your heart rhythm.

Average
49 bpm

[25mm/s, 10mm/mV, 250 Hz] : [Qualitatively similar to a Lead I ECG]

About Fitbit's Heart Rhythm Assessment

How it works

We analyze data collected by the electrical sensors on your Fitbit device to determine if you have a normal sinus rhythm, an irregular heart rhythm suggestive of atrial fibrillation (AFib) or an inconclusive result.

Purpose & Performance

A convenient way to detect AFib. (This is not a diagnosis.) Our proprietary algorithm has been tested in a clinical study. (98.7% sensitivity, 100% specificity)
