## **Inconclusive**

The Heart Rhythm Assessment can't classify this ECG reading.

[ 25mm/s, 10mm/mV, 250 Hz ]: [ Qualitatively similar to a Lead I ECG ]

## **About Fitbit's Heart Rhythm Assessment**

## How it works

We analyze data collected by the electrical sensors on your Fitbit device to determine if you have a normal sinus rhythm, an irregular heart rhythm suggestive of atrial fibrillation (AFib) or an inconclusive result.

## Purpose & Performance

A convenient way to detect AFib. (This is not a diagnosis.) Our proprietary algorithm has been tested in a clinical study. (98.7% sensitivity, 100% specificity)
